# Integrators, consulting firms, consultants: ROK Solution is made for you

## Activate the know-how

**How to share the know-how and expertise among employees and new arrivals without drowning them in documents? How to capitalize on feedback and give value to your company by "activating" know-how ?**

ROK Solution is a collaborative platform that allows for modeling and sharing typical jobs, formats, and applicable methodologies. ROK Solution customizes information distribution: every employee has the relevant documentation.

## Communication, Project management

**How to create a project team by bringing together employees and client representatives? How to outsource certain tasks, monitor and manage the assignment in project mode ?**

ROK Solution lets you create ad hoc external project organizational charts. With just a **few clicks you can create a project Intranet** that can be shared with your client and has all the useful advanced features: organizational chart, email, VOIP, shared processes describing and tracking (alerts) the tasks to be performed by each person, shared EDM, etc.

## Reassure

**How to reassure your prospect of the content of the deliverable under negotiation? How to ensure the efficiency of your job over time? (How will your job stay current ?)**

With ROK Solution you can show how your deliverable will look (process repository, risk map, etc.). **Your deliverable will be structured and may be edited in the desired format.** Your client will be able to "rent" ROK Solution and thereby recover and see a live version of the job performed.

## ROK Store

**How to make your expertise known to potential prospects ?**

You can display your know-how through ROK Apps presented through the ROK Store. When asked whether there was "no shoots itself in the foot," the answer lies in the confidence you have in your expertise. The "client" who will buy your App ROK is likely to also become your customer.

# Change Management

Through ROK Solution, you can recover your processes, repositories, and methodologies intuitively and quickly (see Modeling). The project Intranet is **created with just a few clicks**. The information sharing can even be integrated into the respective Intranets (consulting firm and client). This is even easier when you use ROK
