

# Executing processes with ROK Solution

## Business Process Management and workflow : BPM et iBPMS

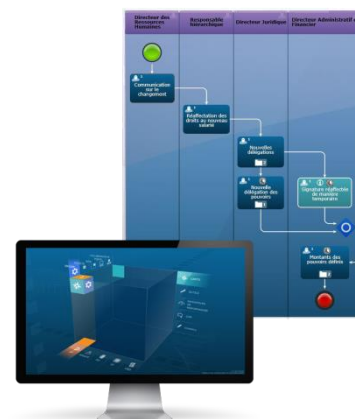

Developing models, executing and distributing a workflow process become so easy that you won't hesitate to automate the shared tasks that hamper efficiency.

Add a workflow engine at any time to your procedures or processes

ROK Solution has a powerful and integrated workflow engine (MS Workflow Foundation). (BPA) procedures are necessarily integrated with the organization and an immediate execution while other market solutions require interfacing two tools.

There are no settings: You automate the sending of reports, payroll parameters, and various questionnaires to be distributed to your teams, etc. A workflow model for everyone: the ROK interface is extremely simple (intuitive role assignment, length of tasks and deadline - all defined in just a few clicks).

Notify actors in real time (social BPM), with an advanced pilot tool

**ROK Solution generates automatic alerts:** Your employees are automatically notified of tasks to perform (email, visual alerts on their control panel, etc.).

ROK Solution integrates workflow's tasks into the messaging system and/or calendar. Advanced pilot tools: The workflow automatically feeds into a Gantt and PERT chart.

Deploy a workflow tool without change management

**Mapping process is actively linked to the organization** and made available to the user in a customized format (Intranet, email, web, etc.). The access is transparent for the end user.
